

OUTCOMES ACHIEVED ACROSS ONE OR MORE DOMAINS (FNPI 7A)

DEFINITION

The FNPI 7a "Outcomes Achieved Across One or More Domains" indicator is a count of the total number of individuals who obtained an outcome. This is different than adding up all the FNPI numbers which would show the total number of outcomes achieved rather than the number of individuals who obtained the outcomes.

FAQ

What is the relationship between "Services Supporting Multiple Domains" in the expenditure categories (Module 2, Section A) and the services (Module 4, Section B) - and between FNPI 7a?

There is no relationship. Services Supporting Multiple Domains are services that can support any of the main domains, such as case management and referrals. FNPI 7a is NOT where you report the number of people who received these services. FNPI 7a is where you report the total number of people at the agency who achieved any outcome.

How do I calculate FNPI 7a?

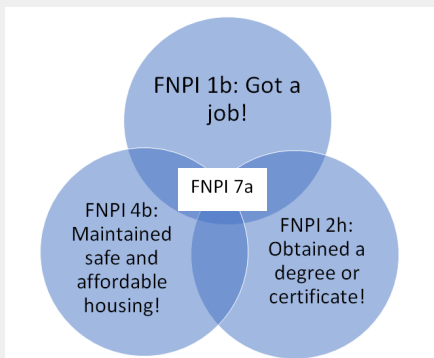

You must have a way to uniquely identify individuals at your agency obtaining outcomes. If that is so, then you simply report each individual once in FNPI 7a that achieved an outcome. This number must be as high as the highest number of individuals reported in any of the NPIs because at least that many people obtained an outcome at the agency.

DRAFT

FNPI EXAMPLE

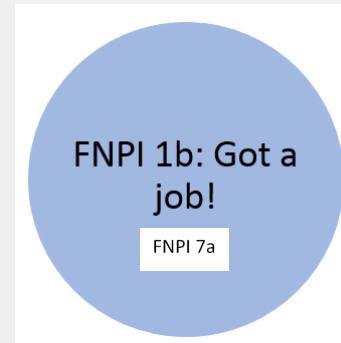

These are examples of situations where people would be counted in FNPI 7a:

1. An individual obtained two different jobs in one reporting period, the individual would be counted one time in the selected FNPI (i.e. FNPI 1b).
2. An individual who obtained employment (FNPI 1b) and a certificate or diploma (FNPI 2g) and maintained housing (FNPI 4b) may be reported in each of those indicators and reported here once.
3. An individual who obtained only one outcome may be reported in that indicator and also be reported here once.

A customer is reported once in FNPI 7a if they obtained multiple outcomes.

Or

A customer is reported once in FNPI 7a if they obtained only one outcome.
